## LETTERS OF RECOMMENDATION

---

**Name:** Dr. Doug Selent

**Occupation:** Former Professor of Computer Science and Software Engineering

**Date of recommendation:** Nov. 2, 2024

I had the pleasure of having Paul as a student in my SE 3430 Object-Oriented Programming course in Spring 2023 at UW-Platteville. This is a challenging, upper-level course in software engineering. As an Engineering Physics major, Paul stood out in a course typically rarely taken by non-majors.

One of the course's main requirements involved a collaborative team project that spanned multiple assignments, emphasizing both software design and teamwork. Paul not only excelled in his technical contributions but also assumed a leadership role, facilitating communication among his teammates and ensuring that project objectives were met efficiently. Paul worked hard both on the technical goals of the project, ensuring the functional correctness of the code and also on facilitating team communication.

I highly recommend Paul for any opportunity that values strong technical skills, diligence, and effective teamwork, and leadership qualities. He is a talented and motivated individual with the potential to make a positive impact in any professional setting.
